Technology with Ingenuity

Hove A/S is a Danish-owned company that was founded in 2000 and has grown significantly since. Hove A/S has its own production and development departments. We develop and sell:

- **Specially designed pumps**
- **Dosing units**
- **Fittings**
- **Flow distribution systems**

We also act as an agency for DK-LOK and Beinlich pumps.

The Easy Grease Concept

It’s all in a small suitcase

Our easy greasing concept consist of automatic transportable lubrication pumps, transportable flow distribution systems and special designed large cartridges.

Using this will provide the following benefits:

- Less downtime during maintenance – field tests have shown a decrease in time spend on lubrication of minimum 50 %.
- Assurance of accurate lubrication – fully automatic high technology used within our systems.
- Less contamination risk – fully closed circuit, from cartridge to connection/greasing point.
- Lower costs on lubricants – larger amounts = lower prices.
- Less muscular stress among technicians – no manual operation required.

The lubrication pumps are mounted in heavy duty suitcases for maximum protection. The suitcases are designed for tough handling and are waterproof, which will also protect the lubrication pumps when used offshore.

Though the easy greasing concept originally was designed for the wind turbine industry, it has been found to be of value to all industries where lubricant greases are used, eg. mining, oil and gas, cement.

Hove Easy Grease

Direct lubrication of a bearing using combination of Easy Grease and hoseset.

Hove Refiller

Refilling of central lubrication system reservoir using Hove Refiller.

Hove Refiller

Hove Refiller is a transportable pump for refilling of grease/lubricant in central lubrication systems. Hove Refiller is operated manually, direct from the pump or by means of a remote control.

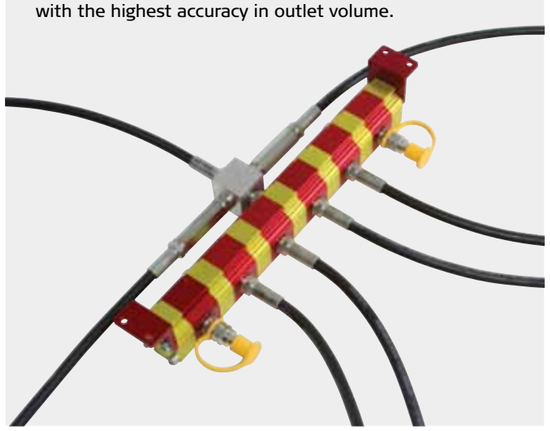
Hove Easy Grease

Hove Easy Grease is a transportable, automatic greasing pump for direct lubrication of bearings and refilling of grease/lubricant in central lubrication systems.

Hove Hoseset

Effectively dividing the flow of grease from the Easy Grease to the various greasing points on the bearings. Hove A/S customized hose-set for your specifications.

The flowdivider we use is a tooth-wheel based model with the highest accuracy in outlet volume.



Hove Cartridge

The hove-cartridges comes in three sizes, 1500, 3000 and 5000 ml. They can be delivered with either full amount, or with the specific amount needed. The Hove Cartridges can be filled with all types of grease found on the market.

The filling of the Hove Cartridge takes place in our own facility under strict procedure and with a high cleanliness policy to ensure no-contamination.
